OF SYMBOLS

This unique project is supported by the following federations:

ERFMI
European
Resilient
Flooring
Manufacturers'
institute

INTRODUCTION

Resilient, textile and laminate floor coverings have a number of specific characteristics and are classified in a number of use classes.

In order to make the classification and these specific characteristics easily understandable and recognizable for the consumer, graphic symbols have been developed.

For practical reasons only symbols were developed for characteristics linked directly to a European standard.

EUROPEAN TECHNICAL REPORT

An official European Technical Report prCEN/TS 15398 is listing all these graphic symbols.

This technical report establishes:

- a system of graphic symbols for use in the marking of :
 - resilient floor coverings manufactured from plastics, linoleum, cork or rubber, excluding loose-laid mats
 - textile floor coverings, excluding loose-laid mats
 - laminate floor coverings;
 - floor panel for loose laying
- specifies the use of these symbols.

COPYRIGHT© NOTICE

These symbols are copyright protected by CEN and can only be used when the product is tested or classified according to the related standard.

The symbols may not be altered, changed in any way except size and colour.

Similarly, no parts or elements of these symbols may be copied or redesigned in order to create non-FCSS symbols.

WWW.FLOORSYMBOLS.COM

On this website, you can find all necessary information regarding this project. You can download a special graphical font with all these symbols free of charge.
